

# Command-line Operations

## Lab 1: Installing Software

Install the **terminator** package on your system.

---

## Lab 2: Removing Software

Remove the **terminator** package on your system.

---

## Lab 3: Finding directories and creating symbolic links

Find the directory **init.d** from **/** and create a symbolic link from your **home** directory to this directory.

---

## Lab 4: Creating, moving and removing files

Create an empty file named **exercise.txt** and move this file to the **/tmp** directory using a relative pathname from your home directory. Then delete this file using an absolute pathname.

---

## Lab 5: Locating applications

Find out the location of the **apt-get**, **yum** or **zypper** command.

---
